

GLEN CROSSBREEDING PROJECT IN FINLAND

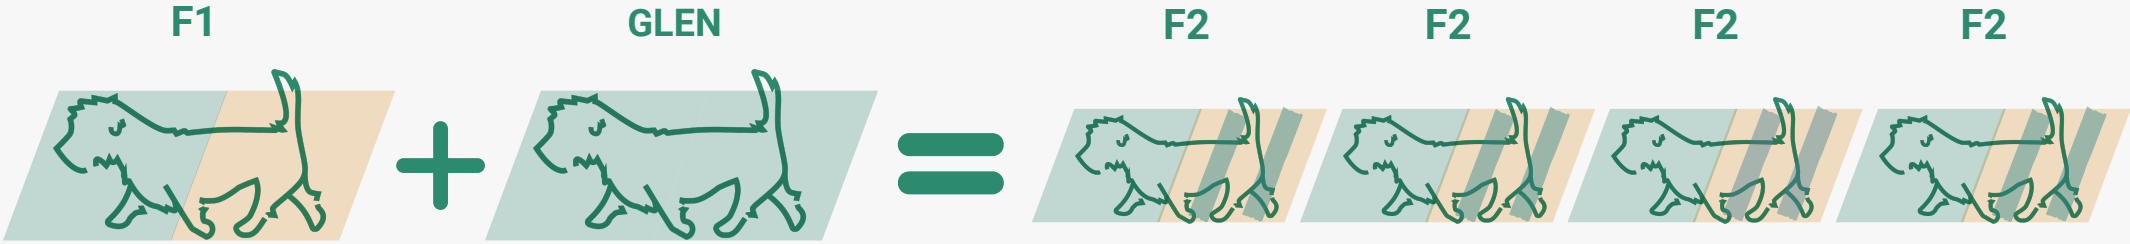

Crossbreeding is the controlled mating of individuals from two different dog breeds. One of the mating partners must belong to the same breed as the crossbred offspring will be registered. Only starting from the F5 generation onwards can the crossbred offspring be registered into the Finnish Kennel Club's FI registry, which is the pedigree registry under the FCI for purebred dogs.

F1

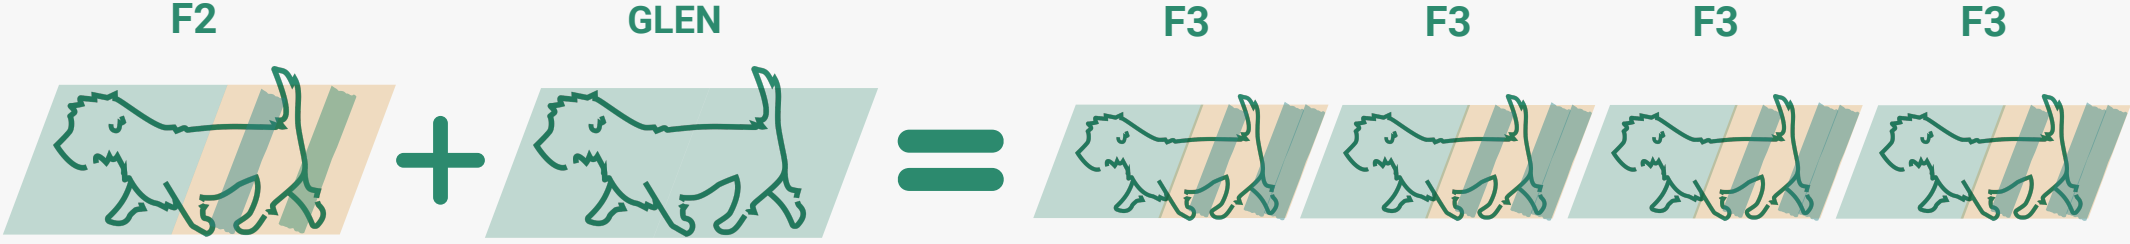

Registered to the Finnish Kennel Club's crossbreeding registry (FI RR), outside of the FCI.

F2

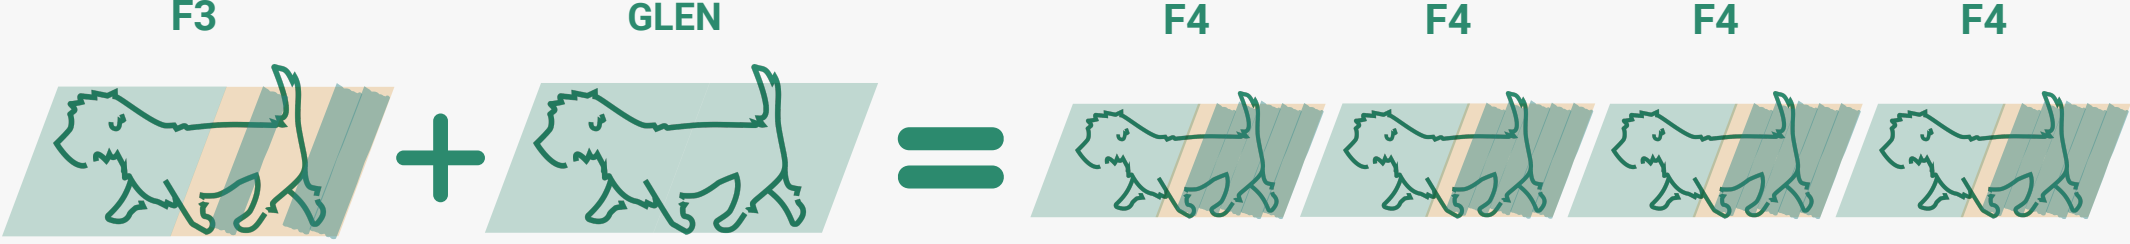

Registered to the Finnish Kennel Club's ER registry, which is a special registry for dogs that do not meet the registration requirements of the regular FI registry

F3

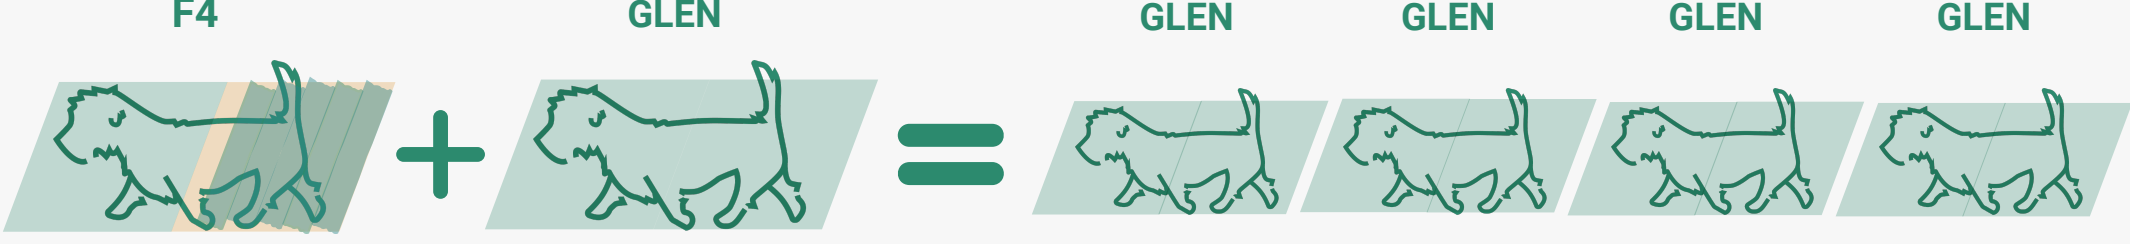

Registered to the Finnish Kennel Club's ER registry, which is a special registry for dogs that do not meet the registration requirements of the regular FI registry

F4

Registered to the Finnish Kennel Club's ER registry, which is a special registry for dogs that do not meet the registration requirements of the regular FI registry

F5

Registered to the FI registry (the pedigree registry under the FCI for purebred dogs).
